In The Hub's Metropolis, James O'Connell charts the evolution of Boston's suburban development. The city of Boston is compact and consolidated—traditionally, “the Hub.” Greater Boston, however, stretches over 1,756 square miles and ranks as the world's sixth largest metropolitan area. Boston suburbs began to develop after 1820, when wealthy city dwellers built country estates that were just a short carriage ride away from their homes in the city. Then, as transportation became more efficient and affordable, the map of the suburbs expanded. The Metropolitan Park Commission's park-and-pavement system, developed in the 1860s, created a template for urbanization that represented the country's first example of regional planning. O'Connell identifies nine layers of Boston's suburban development, each of which has left its imprint on the landscape: traditional villages, country retreats, railroad suburbs, streetcar suburbs (the first electric streetcar line opened in Beacon Street in Roxbury, designed by Frederick Law Olmsted), parkway suburbs, which emphasized public green space but also encouraged commuting by automobile, mill towns, with housing for workers, upscale and middle-class suburbs accessible by outer-belt highways like Route 128, suburban McManus-defined sprawl, and smart growth. Still a pioneer, Greater Boston has pioneered antiproof initiatives that encourage compact, mixed-use development in existing neighborhoods near railway and transit stations. O'Connell remarks that these nine layers of suburban infrastructure are still woven into the fabric of the metropolis. Each chapter suggests sites to visit, from Waltham's country estates to Cambridge triple-deckers.
